Lab 5
Fall 2009
Turner

For this lab you are to write a program designed to copy one file to another, but the new file should have all tabs replaced with 3 whitespace characters and all newlines removed.

The file you'll read from is named Junkfile and the file you'll write is named Cleanfile.

Junkfile will be provided in ~gradercst/TEST/Junkfile   You must go and copy that file you your own directory in order to create your Cleanfile to our specification.

You will demonstrate the operation of your program to the instructor by the due date on the schedule page.
