

CSC 590: Thesis Seminar
Spring 2010
Course Syllabus

March 31, 2010

Instructor: Alexander Dekhtyar
email: dekhtyar@csc.calpoly.edu
office: 14-215

What	When	Where
Lecture	W 12:10 – 1:00pm	14-232B

Office Hours

	When	Where
Tuesday	11:00am - 12:00pm	14-215
Wednesday	9:00am - 12:00pm	14-215
Thursday	1:00pm - 2:00pm	14-215

Description

This is a 1-hour graduate seminar designed to aid M.S. students in conducting their research and preparing and delivering their thesis document.

The main course objectives are:

- To learn what is involved in writing a thesis.
- To learn how to do reasearch.
- To learn how to present research: orally and in writing.

Textbook, Readings

The class does not have an official textbook.

Topics

No.	Date	Topic
1.	March 31	CAESAR CHAZEZ BIRTHDAY CELEBRATION
2.	April 7	M.S. research and thesis
3.	April 14	Thesis document structure
4.	April 21	Thesis document: Introduction, Background
5.	April 28	<i>Guest Lecture</i> (Related Work)
6.	May 5	<i>Short Presentations</i>
7.	May 12	Thesis document: Validation and Experimental Design
8.	May 19	<i>Guest Lecture</i>
9.	May 26	Thesis Presentation
10.	June 2	Thesis Presentation

Furlough

During this academic year all Cal Poly faculty is observing a furlough. I will be observing the following days:

Date	Day of Week	Effect
April 12	Monday	<i>no effect</i>
April 27	Tuesday	no effect
May 14	Friday	<i>no effect</i>
May 20	Thursday	no effect
June 4	Friday	no effect
June 7	Monday	no effect

While the furloughs do not affect the course, I will be out of town on two occasions: April 28 and May 19. I will arrange for a replacement lecture on each of these days.

Grading

Your grade will be determined by the quality of the following deliverables:

1. Thesis reading and critique 15%
2. Research blurb/Thesis Intro 15%
3. Experimental design 10%
4. Related work 20%
5. Short presentation 5%
6. Long presentation 30%
7. Class participation 5%

Course Policies

Exams

The course has **no final exam time** and no final exam. However, we will need to find time during the finals week for the long presentations.

Assignments

The course involves three types of assignments: *reading assignments*, *writing assignments* and *oral presentations*.

Reading Assignments

There will be two key reading assignments in the course:

Thesis reading and critique: you will be provided with a number of M.S. thesis documents from past Cal Poly M.S. students. You will read these documents, and you will prepare and present your assessment/critique of one of the theses.

Relevant literature: you will be asked to prepare a bibliography of academic literature relevant to your thesis/research topic. You will then be asked to read a number of papers from your bibliography.

Writing Assignments

The course will have the following writing assignments:

Research Blurb/Thesis Intro: you will write a succinct introduction to your research area. This introduction should provide an overview of the broad research area within which you are conducting your thesis research and should motivate your specific thesis research. As such, this text can be viewed as a draft of your thesis introduction section.

Experimental design: you will come up with a validation framework for your thesis (creative part of the assignment) and present a short write-up describing it (writing part of the assignment). This can eventually become part of the Validation section of your thesis.

Background/Related work writeup : based on your bibliography of related work you will provide a succinct writeup detailing the background information relevant to your thesis research topic. This may later morph into Related Work or Background sections of your thesis.

Oral Presentation Assignments

You will formally deliver two presentations in this course:

Short presentation: A short (up to 5 mins) presentation describing the essence of your thesis research in terms accessible to your peers.

Long(er) presentation: A longer (15-20 mins) presentation describing your thesis research in more technical terms. This may serve as a prototype of your eventual thesis presentation.

Other Assignments

There may be other assignments in the course:

- **M.S. Defense attendance.** If any M.S. defenses are scheduled this quarter, we will attend them (ideally, I'd want everyone to attend 1-2 defenses).
- **Peer reviews.** Some class activities may involve peer reviews of material produced by others (e.g., past theses) or by other students in the course (e.g., their wiki submissions).

Web Page

Class web page can be found at

<http://www.csc.calpoly.edu/~dekhtyar/590-Spring2010>

Through this page you will be able to access all class handouts including homeworks, project information, reading materials and lecture notes (should the latter be written).

Wiki

The course will feature a wiki:

<http://wiki.csc.calpoly.edu/590>

All assignment deliverables shall be submitted to the wiki. Some written assignments will use wiki pages as deliverables, while others will require you to produce an electronic document (e.g., Word or LaTeX) which would then be uploaded to the wiki. Other materials (your presentation slides, e.g.) will also go there.

Academic Integrity

University Policies

Cal Poly's Academic Integrity policies are found at

<http://www.academicprograms.calpoly.edu/academicpolicies/Cheating.htm>

In particular, these policies define *cheating* as (684.1)

“... obtaining or attempting to obtain, or aiding another to obtain credit for work, or any improvement in evaluation of performance, by any dishonest or deceptive means. Cheating includes, but is not limited to: lying; copying from another’s test or examination; discussion of answers or questions on an examination or test, unless such discussion is specifically authorized by the instructor; taking or receiving copies of an exam without the permission of the instructor; using or displaying notes, ”cheat sheets,” or other information devices inappropriate to the prescribed test conditions; allowing someone other than the officially enrolled student to represent same.”

Plagiarism, per University policies is defined as (684.3)

“... the act of using the ideas or work of another person or persons as if they were one’s own without giving proper credit to the source. Such an act is not plagiarism if it is ascertained that the ideas were arrived through independent reasoning or logic or where the thought or idea is common knowledge. Acknowledgement of an original author or source must be made through appropriate references; i.e., quotation marks, footnotes, or commentary.”

University policies state (684.2): “Cheating requires an “F” course grade and further attendance in the course is prohibited.” (appeal process is also outlined, see the web site above for details.). Plagiarism, per university policies (684.4) can be treated as a form of cheating, although a level of discretion is given to the instructor, allowing the instructor to determine the causes of plagiarism and effect other means of remedy. It is the obligation of the instructor to inform the student that a penalty is being assessed in such cases.

Course Policies

First, all traditional warnings concerning cheating apply in this course. In particular, solicitation of help from people not involved in the course and submission of materials/code etc.. not developed by you are absolutely prohibited. Any outside materials used in preparation of homeworks, reports, project assignments must be properly documents. For example, you must properly cite all papers you refer to, all web resources used in preparation. You must also note any open source, off-the-shelf, etc. . . software or code fragments that you have

incorporated in your solution. If you have questions concerning allowable use of such materials, please consult me **in advance**.

For example, if an assignment is to design and implement an XML parser, you are supposed to build one from scratch and not use any available parser code (which is plentiful). On the other hand, if you want to use an open-source library, or some code developed by one of the team members prior to the course as part of a project solution, this may qualify as allowable use, if the code is used in support of the main tasks of the project.
