6 /**
7 *
8 * BoxPanel is an implementation of JFC's Box as a JComponent, so alignment
9 * operations can be performed on it. The only real work is in the
10 * re-implementations of createHorizontalBox and createVerticalBox, which
11 * return new instances of this JComponent-extending class instead of the
12 * Component-extending Box.
13 *
14 * This BoxPanel class is obsoleted by the 1.4 upgrade of Box, so BoxPanel is
15 * only needed in 1.3 code and earlier.
16 *
17 */
