/****
 *
 * Class OKScheduleAppointmentButtonListener defines the action listener that
 * is attached to the OK button in the schedule appointment dialog.  When the
 * class is constructed, it is passed references to the classes that need to be
 * accessed in the actionPerformed method.  In this case, the required classes
 * are the Schedule model class and the ScheduleAppointmentDialog view class.
 *                                                                        <p>
 * Access to the model is for calling the scheduleAppointment method.  Access
 * to the view is for gathering the data values that are sent to
 * scheduleAppointment.
 *
 */
