```java
package caltool.schedule;

/****
 *
 * A meeting request has all the components of a meeting plus three additional
 * components to specify the latest dates and time at which the meeting can be
 * scheduled.  A meeting request is used to specify a range of possible meeting
 * times, to allow scheduling alternatives to be considered.  The description
 * of the ScheduleMeeting operation has further details on how meeting requests
 * are handled.
 *
 */

public class MeetingRequest extends Meeting {

    /**
     * Construct an empty MeetingRequest.
     */
    public MeetingRequest() {
    }

}
```
