

```
1  *****
2  *
3  * BlockEntry extends SymbolTableEntry by adding a data field to support
4  * nested scoping. The field is a reference to a Symbol table for the block's
5  * scope.
6  *                                     <p>
7  * BlockEntry is intended to support anonymous inner blocks, in contrast to <a
8  * href= FunctionEntry.html> FunctionEntry </a>, which supports the named
9  * scoping blocks defined by a function scope.
10 *
