

Research in Integrated Development Environments (IDEs)

presented by
Gene Fisher

What Is an IDE?

- Integrated collection of tools.
- Basic components are:
 - source code editor
 - compiler/interpreter
 - debugger

Advanced IDE Features

- multi-language support
- code browsing
- graphical views
- testing
- integrated version control

Earliest IDEs

- Lisp environments of the 1970s.
- First terminal-based, then GUI.

The Lisp IDE Experience, Then and Now

```
> (defun avg (l)
    (/ (sum-list l) (length l)))
```

AVG

```
> (defun sum-list (l)
    (if (null l) 0
        (+ (car l) (sum-list (cdr l)))))
```

SUM-LIST

```
> (avg '(1.0 2 3 4 5 6 7 8))
```

4.5

The Lisp IDE Experience, cont'd

```
> (bye)
```

```
Bye.
```

Research Heyday

- Mid-1980s.
- Pioneering environments like
 - PECAN -- the original Eclipse
 - BALSAM -- algorithm animation
 - Daisy II -- mixed language environment
 - Demo -- programming by demonstration

PECAN -- The Original Eclipse

- Provided multi-window viewing and editing.
- An command-line execution window.
- A GUI debugger.
- Stack and data views.
- Syntax-directed editor.
- Incremental compilation.

>>> Program is ready to run
 >>> Breakpoint Set
 >>> Begin execution ...
 Result is 333400
 >>> Breakpoint reached

GO	FORWARD			
BREAK	STEP	NEXT	CLEAR	RESET

( Sample program to illustrate PECA

TYPE
  list = RECORD
    color : (red, green, blue
    value : Integer
  END;

VAR
  x, y : Integer;

BEGIN ( Program sample )
  x := 0;
  FOR y := 1 TO 100 DO
    x := x+y*y-y+1;
    WRITELN('Result is', x);
  WRITELN('Average is', x/100.0);
  STATEMENT
END.
  
```

Figure 8: An execution view

BALSA -- Pioneer in Algorithm Animation

- Provided a wide variety of ways to visualize program behavior.
- E.g., watch as the elements of a list are sorted.
- Visualize complex data structures dynamically.
- E.g, next page shows animation of a compiler.

```
procedure expression;
```

```
  procedure term;
```

```
    procedure factor;
```

```
      procedure expression;
```

```
        procedure expression;
```

```
          procedure term;
```

```
            procedure factor;
```

```
              begin
```

```
                if p[j]='(' then
```

```
                  begin
```

```
                    j:=j+1;
```

```
                    expression;
```

```
                    if p[j]=')' then j:=j+1 or
```

```
                      end
```

```
                else if letter p[j] then
```

```
                  if p[j]='*' then j:=j+1;
```

```
                end;
```

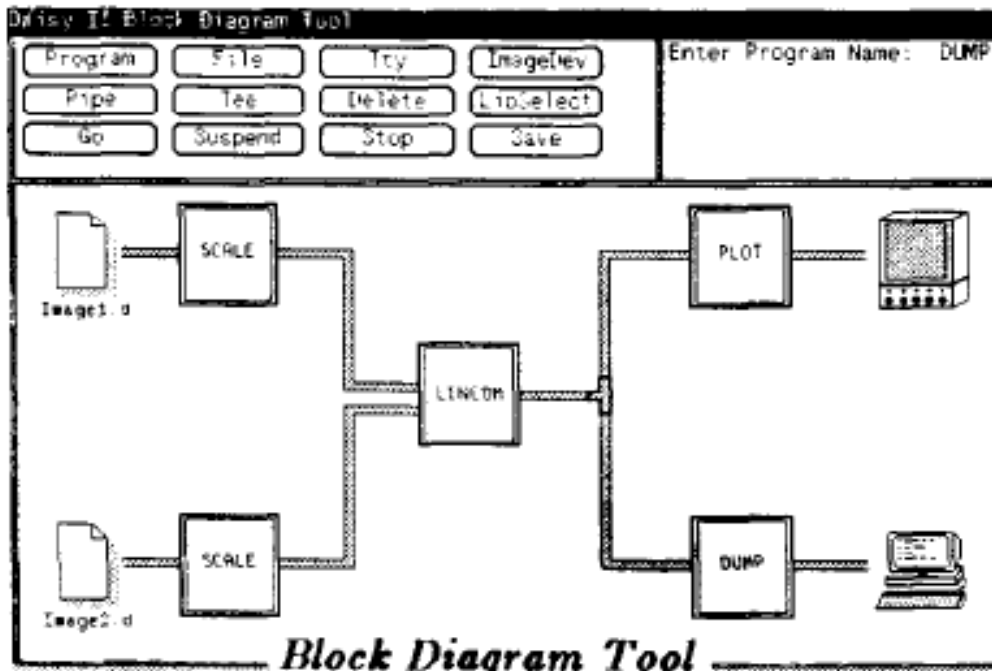

$(A * B + AC) D$

(A * B + (C)) D

Daisy II -- mixed language environment

- Allowed development in a combination of different languages.
- Provided BALSAs- and PECAN-like viewing features.
- Also provided visual input devices.
- And a graphical dataflow tool.

Daisy II Command Edit File: LINCOM.p

```
(Performs linear combination of two image files:
OutFile = Coeff1*InFile1 + Coeff2*InFile2 + Coeff3 )
procedure LINCOM(
  Coeff1,      (Multiplicative coefficient for 1st input file)
  Coeff2,      (Multiplicative coefficient for 2nd input file)
  Coeff3,      (Additive coefficient)
  . . . real;

  Infile1, Infile2  (Input image files)
  . . . ImageFile;

  OutFile         (Output image file )
  . . . ImageFile;
);
```

Language-Sensitive Editor

Daisy II Command Interpreter File: daisy.d

```
P> #include " /src/lib/LINCOM.p"      {load LINCOM}
P> LINCOM;                            {no parameters means invoke control panel}
```

Multi-Language Command Interpreter

 4. Infile1 [<== SCALEa.OutFile
 5. Infile2 [<== SCALEb.OutFile
 6. OutFile [== TEE
- Control Panel**

Demo -- programming by demonstration

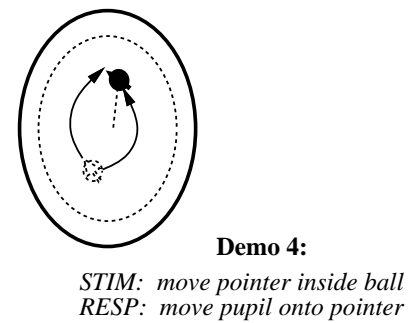

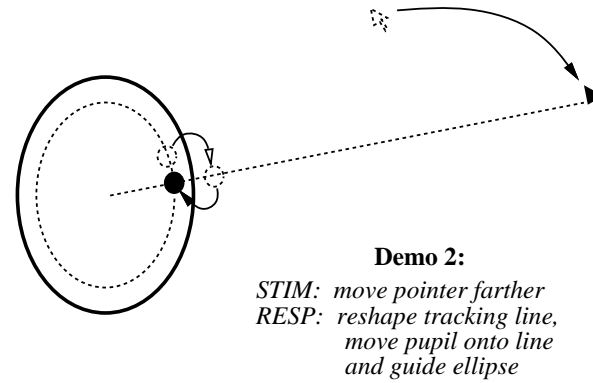

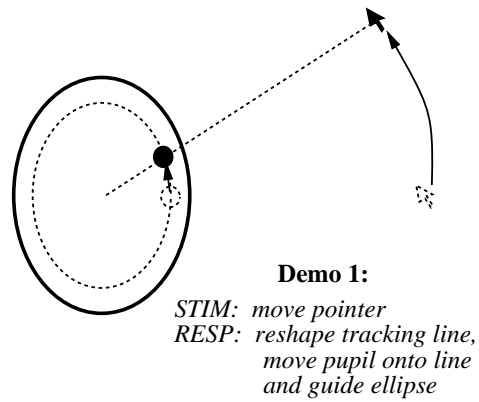

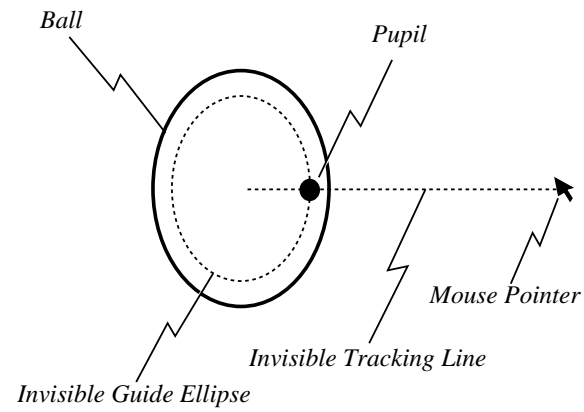

- Allowed graphical demonstrations of GUI behavior.
- General behavior inferred from demonstrations.
- Expert system used to make inferences.
- Code generated.

Productization

- 1990s and 2000s have seen many commercial and open source products.
- Eclipse is noteworthy.
- It has essentially nothing new compared to earlier research environments.
- Does provide a production-quality environment.

Latest Research

- Focus on expanding IDE scope.
- Areas include:
 - o* hypermedia (Chimera)
 - o* collaborative work (Jazz)
 - o* cooperative ubiquitous computing (iRoom)
