

DATE	STATUS	FILES	DESCRIPTION
8feb07	TODO	ButtonPropEd	Remove 'Icon' JTextField, just leaving the icon 'Choose...' button. When an icon is selected, store it in the canvas data, in the same way that images are stored by the 'Image' tool on the Drawing toolbar.
8feb07	BUG	File*	Using the window-manager close button, at least on OS X, does not have the same effect as File->Close. In particular, the button sometimes closes the canvas window before the offer-to-save dialog comes up, and sometimes it does not respond to the 'No' button in the offer-to-save dialog. There is also some interaction with the offer-to-save dialog and the property editor being up.
8feb07	BUG	Component*, File*	Components don't save and open properly.
8feb07	BUG	*Property Editor.java	Some case where property editor does not recognize the creation of a new canvas. Not repeatable as of this writing, but be aware.
8feb07	BUG	*Property Editor.java	Check for invalid data entry in all places. E.g., non-numeric in height/width fields. Some details: Name: free-form string Location: 0 <= x,y <= 10,000 Size: 0 <= ht,wd <= 10,000 Label: free-form string Icon: valid file (must come from chooser; so, disallow typing in file name box)
30nov04	TODO	MenuComponent	When menutree is entirely empty, hide the empty menubar at the top of the canvas.
2nov04	TODO	*Menu*.java	Add keyboard shortcuts, based in idraw.
2nov04	BUG	?.java	When rotating, show the enclosing wire-frame rectangle rotating, not resizing.
2nov04	BUG	?.java	Fix case where right click to end curve is not recognized.
26oct04	FIX	*.java	Fixed zoom and save as bugs that were reported in the QA log.
26oct04	TODO	doc/qa-sop	Do one of these, i.e., an SOP for what should go in each column.
26oct04	TODO	doc/?	Have a users manual, an include "edge" behavior. E.g., when someone shrinks something too small in a prop editor, it goes invisible and can only be re-enlarged with the prop editor again.

9jun04	TODO	MenuBarEditor	Implement original spec of menus behaving differently, i.e., "sticky", in edit mode vs run mode.
9jun04	TODO	Generate	Traverse new menubar to gen code for it.
2jun04	TODO	wherever	To support the menu expansion figure in the spec doc, have some easy way to tear off menus or make them sticky.
1jun04	BUGs	?	File->Save of components not working. Property editor does not appear for any components.
24feb04	TODO	wherever	Change fundamental behavior of move to act like other apps (including idraw and Illustrator) such that original object stays in place while the wire frame is moved around.
