```
/****
 *
 * Class ShortHelpDB is a simple database containing all the short help topics
 * accessible from the command menus when menu help mode is on.  This db is
 * indexable by the names of the menu commands.
 *
 * Note that the instantiated ShortHelpDB is a write-once structure that will
 * never have elements added once a tool has started.  This is because the
 * elements of the ShortHelpDB corespond one-for-one to pulldown menu items,
 * which do not change during tool execution.
 *
 */
