Porting Notes, 20jan06

Suppose your projects directory is in ˜/work. To construct a new makefile for a new platform, say X86, do this:

```
cd ˜/work/fmsl/subprojects/docgen/implementation/executables
mkdir X86
cp OSX/Makefile X86
```

Then edit the X86/Makefile as follows:

```
TOP = /home/ksharma/SeniorProject      # Or wherever you have put it
PLATFORM = X86
```

Then cross fingers and do this:

```
cd X86
make
```
